

VERA: PROTECT YOUR DATA, ANYWHERE IT GOES

Secure any file, on any device, anywhere

The Vera platform can enable businesses of all sizes to protect any kind of data, and then track, audit, and manage the policies securing files in real time, no matter how far they travel. Vera has been designed to help secure confidential data no matter what device, person, cloud, or application it travels to, even if it falls into the wrong hands. We make it effortless to securely collaborate with anyone, no matter which tools they choose to use—email, Box, Dropbox, or file shares.

Simple security and control for all YOUR data

With Vera, you have the ability to secure and track any file, on any device. With a single click, protect documents, presentations, videos, or images with AES 256-bit encryption and granular access policies that travel with the file. And with a simple, consistent interface on every platform, Vera promotes secure behavior and dissuades your employees from choosing risky, insecure workarounds.

- Ability to secure any document, including Office, PDF, movie, and image files.
- Protect data in the “last mile,” after it’s downloaded or sent to another device.
- Enable control for editing, copying, printing, duplication, and more, online or off.
- Create custom watermarks to track who’s sharing your information.

Protection that follows content anywhere

No matter how you collaborate, Vera security follows your documents and data. Secure files using Outlook, Office, and Acrobat, and the protections travel with the document through email, portable drives, and cloud services like Box, Dropbox, and Microsoft OneDrive.

- Work with your everyday apps without changing workflow.
- Ability to revoke file access instantly from any user, device, or cloud storage.
- Enable one-time viewing, or automatically revoke files at a set time.
- View detailed usage reports with file-level activity stats.
- Generate an audit trail, for assistance with tracking and regulatory compliance.

Central administration and policy management

The Vera Dashboard is designed to give IT visibility and control over all content, no matter where it's stored or how it's transferred. Manage access controls, set and update policies, oversee users and activity, and run audit reports on usage.

- View and edit content security policies in real time.
- Revoke access or adjust permissions for files, anywhere.
- Report on activity, policy changes, and access to content.
- Manage users and groups from Active Directory and SSO.
- See global access stats for documents and data.

Vera: a platform supporting enterprise security

Founded by data security experts, Vera is addressing the greatest problem facing every enterprise in the Information Age: corporate data is everywhere. Vera is a content and data security platform that helps protect business information no matter where it's stored, and no matter how it's shared. Built on a scalable, easy-to-integrate platform, Vera attaches encryption, security, and policy directly to the data itself, giving security practitioners and IT teams the power to control it, no matter where it goes.

The imageRUNNER ADVANCE platform can be customized to help meet the specific security requirements of your business. It can integrate seamlessly to provide powerful output management, document capture, information management, and automated workflow solutions that help streamline daily business processes.
