

VERA FOR BOX

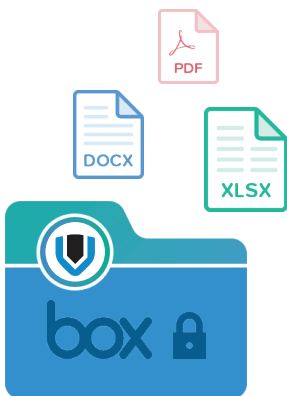

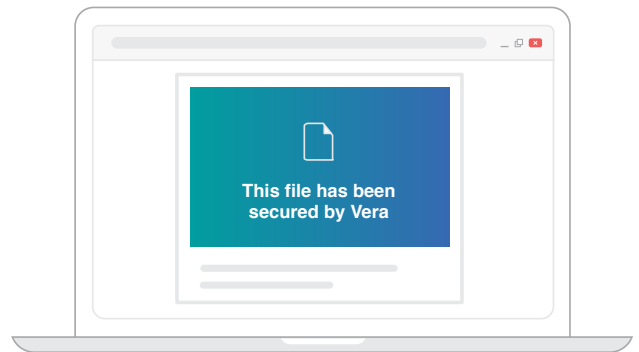

Collaborative, cloud-based businesses can't guarantee how 100% of their content is shared. And, while sync and share solutions like Box provide enterprise-grade security, their protections stop the moment files are shared, removed, or downloaded. As a result, we need new ways to secure shared content, new tools for maintaining control and visibility over files, and the ability to revoke access instantly if something isn't right.

With strong encryption, usage policies, and access controls, Vera provides the ability to automatically secure data in Box and beyond, even after it's emailed, downloaded, or sent to another device. Vera extends security to Box customers "through the last mile"—protecting data anywhere it goes.

SECURE YOUR BOX FILES ANYWHERE THEY TRAVEL

With a single click, Vera encrypts files and assigns access rights that travel with each individual file. No matter where your content is stored—in Box, on your desktop, as an email attachment, or elsewhere in the cloud—with Vera you can:

- Secure any type of file, including documents, presentations, spreadsheets, videos, and images.
- Control editing, copying, printing, and offline access.
- Unsend and "time bomb" files with the Vera recall button.
- Change or revoke access rights, on any platform or any device.

PROTECTION FOR ALL TYPES OF HIGHLY CONFIDENTIAL CONTENT

Quickly and transparently secure specific Box folders or your entire Box account. As users upload new content into a secured folder, Vera makes it possible to automatically encrypt and set default access rights based on existing Box permissions. With Vera, admins can take the burden off end-users to manually secure highly confidential content.

- Use rules to protect data without requiring direct user action.
- Invisibly apply policies to files that may leave your organization.
- Set access controls automatically based on existing Box folder rights.

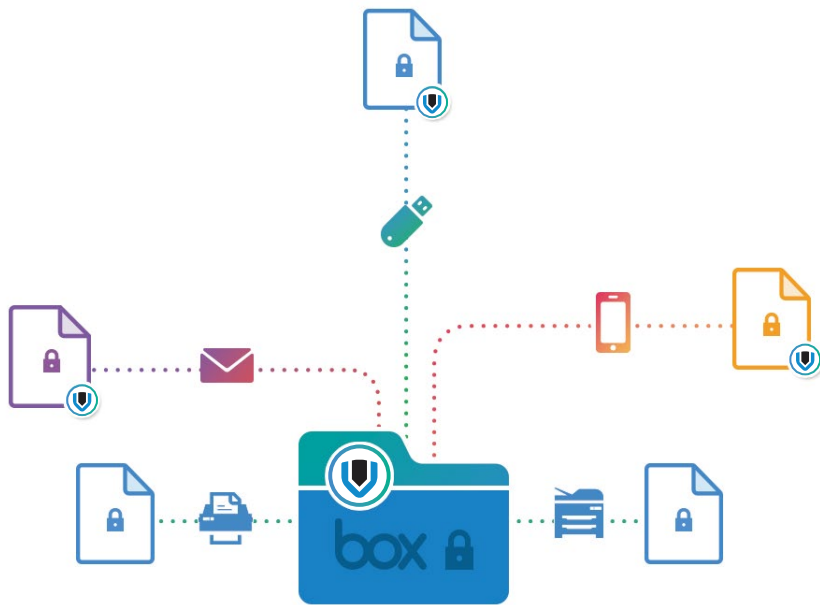

A SEAMLESS INTEGRATION FOR BOX USERS

With its simple and consistent interface, Vera works across any device without impacting the Box user experience. Integration takes minutes to set up, and Vera operates in the background without changing your workflow.

- Collaborate internally and externally, with no app or plug-in required.
- Encrypt, view, and share files from any device, desktop or mobile.
- Consistent experience across Windows, Mac, iOS, and Android.

PROTECT AND TRACK CONTENT, IN BOX AND BEYOND

The Vera Dashboard enables you to track, monitor, and get reports on content usage after it leaves Box. You'll have the ability to see who's opened your files, monitor whether they've been forwarded, and update permissions in real time. Vera enables you to secure and manage all your files, including email attachments and content that never make it to the cloud. With Vera, you can automatically secure your data anywhere it travels.

VERA FOR BOX

Secure any file, anywhere

- AES 256-bit encryption
- Windows, Mac, and Mobile
- iOS and Android support
- Granular access permissions
- Dynamic watermarking
- "One-time view" for files
- Across email and cloud
- Online and offline access

Real-time policy enforcement

- Create and edit policies
- Central admin console
- "Smart default" policies
- AD/SSO integration
- Real-time notifications
- Groups management
- Help desk admin roles
- Domain whitelisting

Central admin and control

- Revoke access, anytime
- Analytics and access stats
- Complete audit logging
- Cloud and hybrid options
- Access location reports
