OFFSET-LIKE QUALITY ON A DIGITAL PRESS

Today's customers expect excellent, offset-like print quality on every job. Print providers can set themselves apart by delivering output that delights customers with outstanding image quality. The Canon imagePRESS C10000VP/C8000VP helps provide smooth and vibrant output quality across a wide range of applications, including textured and synthetic substrates. CV toner and an Advanced Intermediate Transfer Belt combine to help provide efficient transfer to multiple stocks. Six flexible screen patterns include an offset-like, 190-1pi dot screen designed to satisfy varying image requirements.

CONSISTENT COLOR STABILITY TO HELP LIMIT WASTE

Customers expect color to remain accurate throughout a long press run. The imagePRESS C10000VP Series is designed to help minimize the frustration and expense often associated with ensuring that colors are the same within and across print runs.

The imagePRESS C10000VP Series supports color stability with technologies such as:

- CV toner
- Multi-D.A.T. automatic color correction
- Post fusing calibration with In-Line Spectrophotometric Sensors
- Automatic media profiling with In-Line Spectrophotometric Sensors*

TIGHT REGISTRATION TO HELP LIMIT REPRINTS

Registration is a subtle, yet crucial, indicator of print quality, and the human eye quickly picks up on even very small differences. The imagePRESS C10000VP Series uses active registration with a side guide to help correct for skew. To further enhance image-to-sheet registration accuracy, a second image transfer belt is used. Digital correction allows for trapezoid adjustments and compensates for paper shrinkage when duplex printing.

Image-to-sheet registration can be controlled by operators for fine adjustment based on media used. Together, these features provide tight registration that helps produce “first-time-right” output that reduces misprints.

POWERFUL PRODUCTIVITY

EVEN FOR LONG RUNS AND MIXED MEDIA

BUILT TO PERFORM
The imagePRESS C10000VP Series delivers excellent throughput at up to 100 letter-sized images per minute on substrates up to 150 lb. Cover (400 gsm). But as any print provider knows, there’s more to profitable productivity than mere speed. The entire press must integrate multiple technologies that are designed to deliver reliable performance. It’s such integration that differentiates the imagePRESS C10000VP Series in the market and makes it a high-productivity performer for production print providers.

MINIMIZE DOWNTIME
To simplify operator maintenance, some operator-replaceable parts, such as the Primary Charging Assembly and Cleaning Web, can be changed without using tools to help reduce service calls and maintain uptime.

* For a list of validated stocks between 130 lb. Cover and 150 lb. Cover (351 gsm to 400 gsm), please consult the imagePRESS C10000VP Series Specialty Media Handling Guide.
