

5 THINGS YOU CAN DO NOW TO BE CYBER STRONG

BE ALL IN.

Discuss your organization's regulatory compliance obligations and any security policies that need to be monitored or enforced. Remember: Security is everyone's responsibility.

THINK LEAN.

Employ a lean mindset (build, measure, and learn). Design the goals you want to meet. Measure the results qualitatively and quantitatively. Learn and continually monitor the process.

REFINE YOUR PROCESS.

Without good processes in place, productivity can be impacted. Processes should be routinely reevaluated and tested, and then updated as needed.

ASSESS YOUR RISKS.

Risk assessment starts internally to determine what areas and what assets are the most volatile. The next step is to seek a trusted third party to conduct a vulnerability assessment to expose any gaps in the security posture.

CHECK YOUR CULTURE.

Some organizations have a culture that makes process improvement efforts difficult. Redefine the way your employees conduct themselves online. This takes dedication and guidance from leadership and a consistent security awareness training program.

SMART CHANGE STARTS HERE.
