

THE TRANSFORMATIONAL POWER OF DIGITAL WORKFLOWS

WE ARE IN THE MIDDLE OF A DIGITAL ERA. IT REQUIRES A NEW WAY OF WORKING, SECURING, AND GOVERNING CONTENT AS ORGANIZATIONS PROGRESS THROUGH THEIR OWN DIGITAL TRANSFORMATION.

This change into the digital era impacts how organizations build security and governance around their content. Mobility is another huge factor changing the way we work and how we capture and bring content into our organizations. Organizations must transform historically paper driven, manual processes into digitally automated workflows to improve efficiencies.

50%

of structured, repeatable tasks will be automated by 2024.

20%

of workers in knowledge-intensive tasks will have AI-infused software or other digitally connected technology as a coworker.

As more and more organizations focus on digital transformation, a focus around content and how documents come into an organization via scan, online form capture, and mobile capture is being considered.
