

Information Revolution in Education

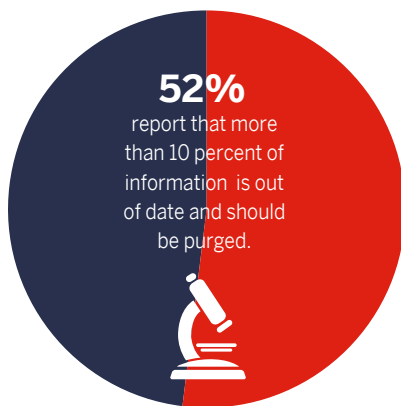

Educational institutions are under pressure to improve information management and governance in ways that improve learning and deliver internal benefits.

 <p>Keep up with rapidly increasing volumes of information</p>	 <p>Improve storage, access, use, and updating of information</p>	 <p>Enhance value provided to students and improve stakeholder relationships with responsive information</p>	 <p>Comply with regulatory requirements, including FERPA</p>	 <p>Improve security of information</p>
---	--	---	---	--

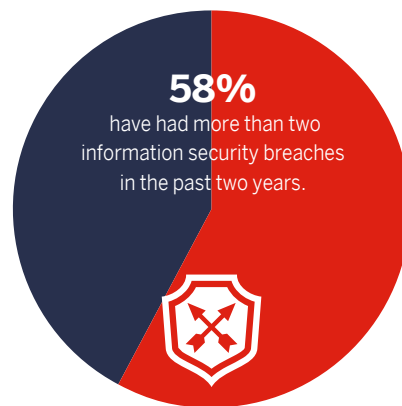

But many institutions are falling behind in deployment of lean information management and governance.

 <p>Strategy</p>	<p>61% don't have an information management and governance strategy with aligned policies and tactics disseminated across the entire organization.</p>
 <p>Best Practices</p>	<p>45% don't have information management and governance training.</p> <p>55% don't have automated classification tools to catalog, store, and protect information.</p>
 <p>Technology</p>	<p>39% have copiers more than five years old.</p> <p>39% have education-specific applications (e.g., LMS, SIS) more than five years old.</p>

Without the right techniques and tools, information performance lags.
