

RIGHTFAX CONNECT

The Clear Choice for a Hybrid Fax Solution

SMART CHANGE STARTS HERE.

RightFax Connect from Canon Solutions America is a cloud-based fax service that helps make it easy to fax with any OpenText RightFax fax server without the cost, time, or hassle of managing a telephone connection to your fax server.

Connecting your fax server to your existing telephone infrastructure can be time-consuming and inefficient to implement, maintain, and manage.

The hybrid fax solution of RightFax fax server and RightFax Connect cloud service can help provide the speed, flexibility, cost savings, and enhance security measures that healthcare providers need to help improve interoperability.

Speed

Speed is perhaps the single most important reason for moving to the cloud.

RightFax server with RightFax Connect is an attractive option for healthcare organizations that want to eliminate the complexity of integrating a telephone network with their fax server software. No resources are needed to monitor or maintain the telephone connections with your fax server software. RightFax with RightFax Connect is a fast and easy solution for such organizations.

Flexibility

Does your office send or receive large batches of faxes on a daily basis? Lab results, prescriptions, and digital images can require large volume fax transmission capabilities. RightFax Connect provides flexible, instant capacity to send and receive large volumes of faxes without volume constraints. Avoid missed or delayed faxes due to busy signals or channel congestion.

Cost Savings

RightFax Connect eliminates telephone lines, long distance charges, fax boards, fax gateways, fax channels and channel maintenance contracts, redundant telephone connections, and other expenses related to connecting RightFax to a telephone infrastructure.

RightFax Connect is fast and easy to implement. It eliminates the time it takes for IT to configure, troubleshoot, and maintain the telephone integration with your fax server.

Security

Security is vital for any fax solution. The hybrid RightFax Connect/RightFax option supports a number of secure communication protocols, including VPN, IPsec, TLS/SSL, and HTTPS to protect Protected Health Information (PHI) and Personally Identifiable Information (PII) in transit.

The strict security measures of OpenText RightFax Connect help you meet regulatory compliance requirements by striving to keep your faxes private, secure, confidential, and traceable.

Data sovereignty is also a concern for many organizations. The hybrid option helps protect your fax data and grant you full control over where your data resides (at the location of your fax server), even when the telephony portion is in the cloud. You retain full ownership of all your content—you control your fax images and the fax metadata. When using RightFax Connect, the data lives on your server in the location of your choice.

BENEFITS

- Get rid of paper-based faxing
- Fast and easy to deploy
- Help save time and money
- Eliminate capacity constraints
- Eliminate inbound busy signals
- Help enhance security of fax transmissions
- Eliminate on-site fax telephony
