

ACHIEVE HEALTHCARE DIGITAL TRANSFORMATION: Addressing HIPAA regulations with comprehensive solutions

Intelligent Information Management can help covered entities maintain HIPAA compliance by helping them manage electronic Protected Health Information (e-PHI) in a secure and traceable way.

CONTROL user access to the system.

CUSTOMIZE access rights for each user.

TRACK changes made to records with audit trails.

SECURE data transfer using https.

ANNOTATE records containing protected health information.

RETAIN records as required and **DELETE** them automatically.

KEY QUESTIONS TO ASK

- Who has access to e-PHI in your systems? Can you restrict access to certain users?
- Can you track how and when changes are made to records?
- Is data in your system stored and transferred in a secure way?
- Can you apply retention policies to your records and delete them at the end of their life cycle?

SUMMARY

Canon Solutions America provides solutions that help make compliance efforts easier thanks to features relating to information access, integrity, and transmission security. Keep data secure and streamline regulatory compliance efforts with detailed audit logs and AD and LDAP integrated access controls. Achieve a holistic patient view through interoperable, accessible care records to provide better patient care. By combining sophisticated software with appropriate procedures related to physical and administrative safeguards, covered entities can more easily comply with the provisions laid out in the HIPAA Security Rule.
