

EXPANDED CAPABILITIES WITH NEW MOBILE PRINT & SCAN APP

With uniFLOW Online 2020.3, the capabilities of the state-of-the-art cloud print and scan platform have been greatly extended. The new uniFLOW Online Print & Scan app helps to enhance the mobile print experience for Apple® and Android™ devices.

Users can simply install it, authenticate, and log in quickly via QR code. The app allows the retention of login details, reducing the need to log in every time it is opened. Alternatively, manual login for registration is available. Each user can register one mobile device to their uniFLOW Online account.

The app also displays personal statistical information of the logged-in user's activities:

- My activity for black-and-white or color pages printed during the current month.
- My activity for Print/ Scan/ Copy/ Fax jobs in the last six months.
- A list of all recent jobs performed.

There are multiple ways to quickly and easily submit print jobs. From within the app, you can use "File upload" or "Take a picture."

- File upload allows you to simply browse to the file you want to print and upload it.
- Take a picture allows the use of the smartphone camera to photograph a document and submit it for print. The Correct Distortion function detects the edges of the document, flattening out any trapezoid effect to help ensure a perfect crop.

Mobile phones are a crucial component of mobility and digitization. Received documents are opened quickly to review the content. Using the new uniFLOW Online Print & Scan app, users can easily send the document to print at any connected device, just before the next meeting starts. At all times, users have insight into all their recent print, scan, copy, and fax activities.

Please note: The minimum operating system requirements are iOS 11 and Android 8.

SMART CHANGE STARTS HERE.
